Proceedings Summary of 69th Annual Meeting.. vi
Annual Report of AFS General Manager..... xi
Annual Report of AFS Treasurer..... xiv
Annual Report of AFS Technical Director..... xv
Minutes of AFS T&RI Trustees Meeting..... xvii
Minutes of AFS Board of Directors First Meeting xviii
Minutes of AFS Nominating Committee Meeting xxi
Minutes of AFS Board of Directors Second Meeting xxii
Minutes of AFS Board of Directors Final Meeting xxvi
Minutes of AFS T&RI Trustees Meeting.....xxviii
Minutes of AFS Technical Council Meeting..... xxix
22nd Annual Chapter Officers Conference..... xxx

Unidirectional Solidification of Steel Castings .. 1
Effect of Iron Content and Sodium Modification on the Machinability of Aluminum Die Castings 14
Very Low Impurity Levels Via Air Induction Melting 20
Mechanical Properties of Unidirectional Steel Castings 28
Riser Design for Mold Dilation 34
A New Approach to Foundry Scheduling and Production Control 41
Effect of Moisture Content on the Action of Seacoal in Green Sand 46
Better Information Flow for Better Castings ... 49
Effect of Silicon Carbide in the Fe-FeSi-Fe_3C System 53
The Economic Production of High Density Gunmetal Castings Made in Sand Molds 65
Hot Boxes! Progression to Superheating of Air for Core Boxes 84
High Pressure Squeeze Systems–Testing and Control 89
The Development of Average Density Variations Within Rammed Sand Mixtures 99
A Study on Expansion of Green Sand as Affected by Seacoal 107
Full Mold Process–the Direct Approach to Metalcasting 129
Data Collection for Computer Analysis of Casting Quality Factors 132
Effect of Transformation Zones on Casting Problems 134
Comparative Study on Production of High Grade Cast Iron When Melting Without Pig Iron ... 142
Are Carbonyls Causing Penetration and Burn-on in High Density Molds 155
Precision Green Sand Molding 177
Effect of Vacuum Heat Treating on High Strength Steel Castings 187
Pressure Casting in Investment Molds 194
Production of Thin As-Cast Ductile Iron 204
Liquid Metal-Refractory Reaction Studies 214
Nature and Origin of Gas Holes in Iron Castings 224
Cupola Performance–The Potential for Oil Injection 241
Further Development of Mg-Zn-Ag-Zr Casting Alloys 246
Comparison of 70 Per Cent Alumina to Regular Clay Refractories as Used in 30-ton Basic Open Hearth Ladles 255
The Problem of Feeder Dimensioning and Cooling Curve Method 263
Cement Linings-Induction Furnaces
Part I–Low Frequency Core-Type
Part II–Low, Middle and High Frequency Coreless Types 270
A Contribution to Our Understanding of the Mechanism of Hot Tearing of Cast Steel 282
Casting Fluidity and Fluidity of Aluminum and Its Alloys 292
Time to Retire 305
Refinement of the Graphite Structure of Pig Iron by the Injection of Nitrogen in the Ladle 311
Melt Loss Prevention for Magnesium Alloys 317
Development of Techniques for Manufacture of 300K Explosive Embedment Anchor Castings 322
Aluminum Castings from Expanded Polystyrene 327
A Metal for Measuring Volumetric Contraction During Solidification 333
Advances in Cement Technology for Induction Furnaces 336
Effect of Silicon Content on the Heat Treatment and Mechanical Properties of Nodular Iron ... 344
Riser Size and Placement for Copper Alloy Castings 355
Plutonium-Cerium-Cobalt Fuel Development for Molten Reactors 362
Purchasing Practices and Problems 369

Layer Porosity Effects in Aluminum-10% Mg Alloy Castings 371
Refractory Requirements for Large Induction Furnaces in the Ferrous Foundry 380
The Application of Basic Risering Data to Production of High Integrity Valve Stems 386
The Applicability of Polystyrene to the Making of Patterns 394
A Microradiographic Study of the Shrinkage and Behavior of a Low Alloy Steel 397
The Effect of Nickel on the Mechanical Properties of High Strength Yellow Brass 405
Making of Diecasting Dies by the Shaw Process 412
Inert-Gas Shielding and Automatic Pouring of Liquid Metal for Production of Premium Quality Castings 433
Influence of Magnesium Content on the Nodularizing Efficiency of Magnesium-Ferrosilicon Alloys 442
The Application of a Digital Computer for Identifying Critical Process Variables in Casting Production 446
Some Technological and Metallurgical Characteristic Features of the Electric Induction Melting of Iron and Steel 454
Segregation Zones in Multiphase-Alloy Melts—A New Foundry Variable 460
The Critical Temperature Range in Cast Irons .. 473
The Effect of Processing Variables on Ductile Iron Quality 488
High Pressure Molding 497
End Chills Thermal Behavior and Effect on Casting Soundness 502
Pattern Material Wear Studies 509
Magnetic Comparator Inspections 514
Research on Premium Quality Castings in Light Alloys 525
Arc-Melting and Casting of Refractory Carbides 541
Development of Criteria for Proper Selection of Exothermic Riser Sleeve Material 548
Mechanism of Green Sand Bonding as Affected by the Clay-Water Relationship 555
Gating of Die Castings 569
Radiographic Indications and Mechanical Properties of Bronze Castings 598

SUBJECT INDEX

A

Alloy(s):
- Cell-boundary growth 469
- Multiphase-alloy melts 460
- Segregation zones 460
- Solidification 460

Aluminum:
- Casting fluidity 292
- Fluidity
  - Beryllium 292
  - Metallic molds 292
  - Mold materials 292
  - Spiral mold 296
  - Titanium, effect of 303
- Fluidity of aluminum and alloys 292
- Al-10% Mg castings 371
- Chilled plate castings 371
- Elongation 374
- Layer porosity 371
- Tensile properties 371
- Tensile strength 374
- Test bars 375

Aluminum Castings:
- Density 327
- Polystyrene patterns 327

B

Brass and Bronze:
- Angle of bend 606
- ASTM, B-30, 8B 405
- Brass castings, in tension .. 598
- Brinell hardness 410
- Bronze castings, in bending 598
- Elongation 410
- High strength yellow brass. 405
- Impact-bend tests 603
- Mechanical properties 405
- Mechanical properties of bronze castings 598
- Microstructure 411
- Mn-Ni-Al bronze castings .. 604
- Nickel 405
- NDT methods 598
- Radiographic indications of bronze castings 598
- Tensile properties 605
- Tensile strength 405
- Tin bronze alloys 607
- Yield strength 409
- Zinc equivalent 409

C

Casting Competition:
- New techniques 307

Casting(s):
- Air gap formation 502
- Alumina-silica 323
- Aluminum-4.5% copper alloy 502
- Anchor, embedment 322
- Arc-melting of refractory carbides 541
- Automatic pouring 433
- Cast carbide, properties of. 541
- Cast hypereutectic zirconium carbide 543
- Chills used: copper, cast iron anodized aluminum, electrode graphite 502
- CO_2 bonded 323
- Density, uniform high 433
- Digital computer, application of 446
- End chills 502
- Gating system 433
- Heat treatment 325
- Heat treatment 534
- High strength steel 322
- Identifying critical process variables 446
- Inert-gas shielding 433
- Interface temperature 504
- Light alloy 525
- Liquid metal flow 530
- Mechanical properties 433
- Melting techniques 541
- Melt quality 529
- Molding material 323
- Mold probe 433
- Nitrogen 433
- Operating cycle, automatic. 433
- Porosity, freedom from 433
- Premium quality 525
- Quality index 453
- Refractory carbides 543
- Refractory compounds, electric melting of 541
- Solidification 502
- Solidification 531
- Soundness 502
- Steel Anchors 322
- Strength-to-weight ratio ... 539
- Temperature gradients 502
- Tensile properties 529
- Thermal behavior 502
- Transformation zones
  - Casting defects 134
  - Condensate 140
  - Dimensional variances .. 135
  - Gas forming defects 136
  - Green sand 134
  - Pressure and temperature gradients 134
  - Stress patterns 134
  - Zone mechanism 134

Cast Iron:
- Austenite to ferrite transformation 473
- Carburization 147
- Coke ratio 148
- Combustion 146
- Critical temperature range. 473
- Cupola melting 142
- Desulfurizing 151
- Duplex method 154
- Electric furnace 142
- Gas holes, nature and origin 224
- Gray and ductile iron 154
- Heat balances 142
- High grade 142
- Hot blast cupola 143
- Induction melting 454
- Manganese 473
- Material and melting costs. 454
- Microsegregation 473
- Phosphorus 473
- Re-solution time 473
- Secondary graphitization .. 473
- Shaking ladle 142
- Silicon in cast iron 473
- Two-phase region 473

Cast Steel:
- Brittle behavior 397
- Columnar grains 11
- Deoxidation, deoxidizers .. 397
- Directional and gas-free solidification 397
- Effect of carbon 404
- Hot tearing
  - Phosphorus 282
  - Segregation of sulfur and phosphorus 282
  - Sulfur 282
  - Test bar, shape of 284

Impurities 399
Induction melting 454
Low alloy 397
Material and melting costs . 454
Microradiograph 402
Microradiographic study .. 397
Microshrink 400
Quality 397
Reduction in area 404
Shrink Count 403
Solidification 402
Shrinkage 397
Stress concentration 397
Test casting 400
Cooling Curve Method:
As applicable to feeder dimensioning 263
Cupola:
Oil injection
Computer prediction of performance 241
Fuel oil, oxygen, hot blast 241
Melting rate 244
Thermochemical model .. 241
Cast Steel:
Solidification rate 2

D

Die Casting:
Alloys 412
Aluminum
Electron microprobe analysis 17
Iron content 14
Machinability 14
Microstructure 14
Sodium modification 14
Tool life 14
Designing of dies 412
Die life 412
Gating system 412
Heat treatment 412
Melting and pouring 412
Molding methods 412
Patternmaking 412
Refractory materials 412
Shaw process 413
Ductile Iron:
Carbon equivalent 489
Cell-boundary growth 488
Ferrosilicon inoculation 488
Iron analysis 488
Late shakeout 204
Magnesium treatment 488
Microstructural data 490
Nodule count 493
Post-inoculation, instantaneous inoculation .. 204
Processing variables 488
Quality 488
Thin, as-cast, production of 124
Thin sections 204
Venting 204

F

Feeder Dimensioning:
Al-Si eutectic alloy 263
Cooling Curve Method 263
Exothermic 263
Feeder volume 263
Solidification 263
Solidification time 263
Thermal analyses 263
Fluidity:
Aluminum and alloys 292
Furnace:
Alumina and magnesia lining cements 336
Alumina cements 339
Castables 336
Castables, coreless-type 343
Castables, core-type 342
Cement gunning 343
Cement technology 336
Coreless- and core-type, linings for 338
Dry ramming mixes 336
Fused alumina based cement 337
Gunning mixes 336
Induction
Channeled furnaces 380
Copper and copper base alloys 273
Coreless furnace 383
Ferrous foundry, in the . 380
Low frequency, core-type 270
Low, middle and high frequency coreless-types . 270
Magnesia and alumina linings 270
Patching 270
Rammed cements 270
Refractory practice 380
Refractory requirements . 380
Refractory requirements . 270
Silica lining 380
Sintering procedure 276
Slag chemistry 380
Linings, induction 336
Magnesia cement 340
Rammed linings 337
Refractories 336

G

Gas Holes:
Blowholes 224
Blowholes due to metal inserts 229
Blowholes from green sand molds 229
Blowholes from sand cores . 230
Carbon/oxygen reaction holes 224
Cast Iron 224
Core and mold gas, entrapment of 224
Core gas blowholes 232
Defects 224
Fissure defects 231
Gas evolution rates 233
Hydrogen/nitrogen pinholing 224
Hydrogen pinholing 224
Nitrogen blowhole defects . 226
Nodular iron, pinhole defects in 235
Oxidized pinholes 238
Slag-reaction holes 236
White iron, surface pinholes in 239
Gates and Gating:
Aluminum alloy die castings 569
Die castings 569
Fan-type ingates 569
Fluid flow 569
Heat flow 569
Jet type fill 587
Piston pressure 583
Plunger velocity 583
Porosity 583
Pouring times 569
Pressure velocity curves ... 581
Radiographs 587
Solid front fill 589
Solidification time 569
Steel dies 569
Turbulence 569
Water analogy experiments 569
Zinc alloy die castings 569
Graphite:
Fine grained castings 311
Fine grained pig iron 316
Nitrogen injection 311
Porous refractory plug 311
Structure, refinement of 311

H

Heat Treating:
Effect of vacuum on steel castings 187
High Pressure Squeeze:
Density control 94
Moisture density 89
Moldability index-density relationships 89
Mold strength 95
Permeability 95
Springback 40
Squeeze pressure 92
Stripping force 90
Testing and control 89
Hot Tearing:
Cast Steel 282

I

Induction Melting:
Cobalt iron alloys 27
Decarburization 25
Deoxidation 20
Dephosporization 26
Desulfurization 22
Nickel-iron alloys 27
Stainless steel 26

M

Magnesium alloys:
Castability test 251
Cerium-bearing, 5% magnesium 442
Chemical composition 253
Chilling 246
Density, Mg-Zn-Ag-Zr system 246
Ductile iron 442
Fluorspar 319
Flux refinement 317
Further development of, Mg-Zn-Ag-Zr 246
Hot tearing 246
Inspissating agents 321
Inspissator effects 319
Lampblack 319
Low phosphorus pig iron .. 443
Magnesium content, influence of on nodularizing efficiency 442
Magnesium recovery 442
Melt loss 317
Melt oxidation 317
Mg-FeSi alloy, efficiency of 442
MgO 318
Microshrinkage, susceptibility to 246
Oxidation control 320
Oxidation of 317
Porosity 253
Quenching 246
Transfer ladle technique ... 442
X-ray soundness rating 251
Section thickness, effect of . 250
Tensile properties, Mg-Zn-Ag-Zr 246
Thin-walled premium quality 246

Molding:
Full Mold process
Design 129
Pattern 129
polystyrene 129
Green sand properties 497
High pressure 497
Mold creep 500
Mold density 499
Mold permeability 500
Mold strength 500
Packing density 498
Surface finish 501

Molding Sand:
Green
Clay content 177
Defect control 177
Dense molds 178
Expansion 181
Mold strength 179
Mold wall movement 177
Penetration 182
Penetration and fusion ... 185
Precision green sand 177

Mold(s):
Burn-on, thermo-chemical . 155
Carbonyls 155
Electron microprobe analyzer 159
Ferro-static metal pressure . 155
Gray iron metal penetration 155
High density 155
Iron silicate, formation of .. 155
Magnetic sand 163
Mold atmosphere 165
Petrographic analysis 161
Sand mixtures 155
Springback 169
Vapor pressures 172

Molten Reactors:
Chill cast 365
Plutonium-cerium-cobalt fuel 362
Vacuum cast rods 362

N

Nodular Iron:
Annealed 344
Ferritic 344
Ferritic-pearlitic 344
Mechanical properties 344
SAE D5506, D4512 344
Silicon 344

Nondestructive Testing:
Magnetic comparator inspections 514
Magnetic sorting 514
Malleable iron 514
Oscilloscope 524

P

Patternmaking:
Abrasion test apparatus 510
Core box wear study 511
Iron 394
Material, abrasive wear resistance 509
Materials
ASTM class 40 gray iron . 509
Epoxy plastic 509
Polyurethane 509
356-T6 cast aluminum ... 509
85-5-5-5 brass 509
Material wear studies 509
Polystyrene 394
Styrene patterns 394

Pressure Casting:
Copper-base alloys; alloy A356 201
Defects 194
Direct pressure diaphragm casting 194
Fluidity tests 194
Metal turbulence 194
Nonferrous investment casting 194
Suction-pressure casting methods 195
Thin-sectioned aluminum casting 194

Production Control:
Computer data 43
Control procedure 41
Evaluation 45
Forms, use of 44
Foundry scheduling, a new approach 41
Load form 42
Principles of scheduling ... 42
Status report 42

Purchasing:
Costs 369
Material delivery 369
Price 369
Suppliers 369

Q

Quality Control:
Advanced techniques 49
Casting factors 132
Computer data collection . 132
Information flow, improved 49
Information systems, types of 52
Inspection arrangement ... 49
Meaningful analysis, capabilities for 51
Multiple regression 132
Process variables 49
Production report and procedure 50

R

Refractory:
AMS 5350, 713C alloys 214
Ceroxides 261
Clay 255
Cost 260
Crucible and mold refractories 214
Crucible materials 214
Defect content 223
Fused silica 214
Ladles 255
Macroinclusions 255
Metal-ceramic reactions ... 214
Seventy per cent alumina . 255
Stabilized zirconia 214
Zirconium silicate, alumina refractories 214

Risers and Risering:
Chemical analysis 386
Chilling 386
Cooling curves 392
Copper-silicon-nickel alloy . 393
Cupro-nickel, 70-30 358
Directional solidification ... 386
Effective feeding distance . 34
Elongation 391
Exothermic compounds ... 355
Exothermic sleeve material . 548
Exothermic sleeves 39
Feeding distance 355

High integrity valve stems . 386
Manganese bronze 355
Materials for low alloy steel castings 548
Mechanical properties 386
Mold design 386
Mold dilation 34
Mold dilation 40
Neck design 355
Nickel aluminum bronze ... 355
Pipe, aluminum bronze ... 35
Pipe, aluminum silicate ... 35
Pipe, nodular iron 35
Pipe, white iron 35
Pipe, zircon green sand ... 35
Radiographic analysis 357
Riser shrinkage 361
Riser size calculations 355
Side riser 38
Silicon brass 393
Silicon bronze 393
Size and placement for copper alloy castings 355
Steel 37
Steel castings 40
Refractory:
Stopperheads 255
Risers and Risering:
Top risers 38
Vertical feeding distance .. 357

S

Sand:
Bentonite bonding mechanism 563
Bentonite content, determination of 561
Bonding 556
Density 99
Green
as affected by seacoal 107
Bonding 555
Clay-water relationship . 555
Dimensional stability ... 107
Expansion 107
Molding additive 46
Seacoal, effect of moisture on 46
Seacoal fineness 128
Volatile matter 46
Water bonding 558
Loss of permeability 48
Mixtures 47
Mold rigidity 567
Rammed sand mixtures 99
Specimen preparation 47
Test mold preparation 47
Sand Mold(s):
Ammonium bifluoride 79
Chill-cast gunmetal 70
Copper-tin alloy 65
Creep properties, effect of nickel on 73
Equiaxial grain structure ... 67
Gunmetal castings, high density, economic production of 65
Hydrocarbons and hydrogen 74
Interdendritic porosity 65
Interdendritic shrinkage ... 67
Leaded gunmetal 65
Microporosity 66
Nickel-free 85-5-5-5 leaded gunmetal 70
Metal-mold reaction 66
Phosphorus content, residual 74
Pressure-tightness 67
Tin-bronze alloy 65
Ultimate tensile strength ... 69
Shell Molds and Cores:
Air, superheating of 84
Blow plate, water cooled ... 85
Core lightener blocks 85
Core stripping 85
Ejection mechanisms 85
Furan 86
Hot boxes 84
Manifold design 85
Phenolic resin sand 84
Sand chamber blow tubes .. 85
Tubular lift pins 87
Venting 85
Silicon Carbide:
Austenite, oversaturation of 54
Behavior of, in molten cast iron 53
Dual structure 56
Effect of, in Fe-FeSi-Fe$_3$C System ... 53
Electrolytic iron 63
Graphite precipitation 56
Inoculating agent 54
Nuclei 53
Solidification:
Aluminum alloys 333
Contraction, measurement of 333
Nodular iron 333
Shrinkage 333
Volumetric concentration . 333
White iron 333
Steel Castings:
AISI 4340 1
Charpy impact strength 32
Chill materials 1
Ductility 28
Elongation 32
Endurance ratio 28
Heat flow 1
Impact and fatigue properties 28
Inclusions 30
Low Alloy 1
Mechanical Properties 28
Mechanical properties 187
Solidification structure 28
Tempering and cooling in vacuum 190
Unidirectional solidification 1
Vacuum heat treating 187
Vacuum induction melted . 187
